

What is claimed is:

1. A device for protecting the interior seat, seat back and foot well of a moving vehicle from being soiled by a child in a safety seat, comprising:

5 a mat having a conformal surface for placement between a safety seat and said seat of the vehicle, said mat having a lateral dimension and a longitudinal dimension, wherein said mat lateral dimension extends beyond the lateral confinement of said safety seat and has a flange outwardly
10 extending at least 1 inch from said conformal surface and around at least a portion of the perimeter of said mat to define a containment area for containment of liquid spills within said mat, and said mat longitudinal dimension further extends beyond the base of said safety seat and into said
15 foot well.

Sub B1 2. The device as claimed in Claim 1, wherein said mat longitudinal dimension further includes an extended surface that conforms to said vehicle seat back.

3. The device as claimed in Claim 1, wherein said mat is plastic, and is capable of being folded.

4. The device as claimed in Claim 1, wherein said mat containment area includes a pass-through for a safety belt.

5. The device as claimed in Claim 4, wherein said pass-through includes a flange outwardly extending at least 1 inch from said conformal surface of said mat, and extends around at least a portion of the perimeter of said pass-through to maintain the integrity of said containment area for containment of liquid spills within said mat.

6. The device as claimed in Claim 1, wherein said foot well includes a horizontal surface and a vertical surface, and wherein said conformal surface of said mat includes a horizontal portion that conforms to said seat, a vertical portion that conforms to said vertical foot well surface, and a horizontal portion that conforms to said horizontal foot well surface.

7. The device as claimed in Claim 6, wherein said conformal surface of said mat further includes a vertical portion that conforms to said seat back.

8. The device as claimed in Claim 1, wherein said mat accommodates more than one safety seat

9. The device as claimed in Claim 1, wherein said mat lateral dimension extends beyond the lateral confinement of said safety seat at least 3 inches.

10. The device as claimed in Claim 1, wherein said mat is comprised of multiple pieces.

11. A device for protecting the interior seat, seat back and foot well of a moving vehicle from being soiled by a child in a safety seat, comprising:

5 a mat having a conformal surface for placement between a safety seat and the seat of a vehicle, said mat having a lateral dimension and a longitudinal dimension, wherein said mat lateral dimension extends beyond the lateral confinement of said safety seat at least 2 inches, and has a flange
10 extending outwardly from said mat surfaces at least 1 inch from said mat conformal surface, said flange extending around the perimeter of said mat to define a containment area for containment of liquid spills within said mat, said
15 mat also contains a pass-through for a safety belt that maintains the integrity of said containment area for containment of liquid spills within said mat.

Sub 12. The device as claimed in Claim 11, wherein said mat containment area is capable of containing more than one-half liter of liquid.

13. The device as claimed in Claim 11, wherein said mat longitudinal dimension further extends beyond the base of said safety seat and into said foot well.

14. The device as claimed in Claim 11, wherein said foot well includes a horizontal surface and a vertical surface, and wherein said conformal surface of said mat includes a horizontal portion that conforms to said seat, a
5 vertical portion that conforms to said vertical foot well surface, and a horizontal portion that conforms to said horizontal foot well surface.

15. The device as claimed in Claim 14, wherein said conformal surface of said mat further includes a vertical portion that conforms to said seat back.

16. The device as claimed in Claim 11, wherein said mat is comprised of multiple pieces.

17. A device for protecting the interior seat, seat back and horizontal and vertical surfaces of the foot well of a moving vehicle from being soiled by a child in a safety seat, comprising:

5

Sub B3

a mat having a conformal surface for placement between a safety seat and the seat of a vehicle, said mat having a flange extending outwardly at least 1 inch from said mat conformal surface, said flange extending around at least a portion of the perimeter of said mat to define a containment area for containment of liquid spills within said mat, and said conformal surface of said mat includes a horizontal portion that conforms to said seat, a vertical portion that conforms to said vertical foot well surface, and a horizontal portion that conforms to said horizontal foot well surface.

10

15

Sub 18 18. The device as claimed in Claim 17, wherein said mat has a lateral dimension and said mat lateral dimension extends beyond the lateral confinement of said safety seat at least 2 inches.

19. The device as claimed in Claim 17, wherein said mat containment area is capable of containing more than one-half liter of liquid.

ent.
01

20. The device as claimed in Claim 17, wherein said conformal surface of said mat further includes a vertical portion that conforms to said seat back.
